

Process Automation

With ever-evolving business and technology requirements, it is imperative for companies to have flexible building blocks plugged in to the correct architecture to build integrated and advanced applications.

Praxis's Process Automation services help clients address evolving business and technology challenges by defining, designing and building applications tailored to meet business requirements. Praxis delivers high-quality, flexible applications that are easy to maintain; modular to facilitate enhancements and are reliable, secure and easy to deploy. Praxis helps its clients to achieve this through standard industry processes and quality frameworks and using rigorous methodologies combined with its deep understanding and technological expertise in select domains.

Praxis partners with enterprises to roll out tailored applications effectively which results in lower TCO, mitigated and managed risks and delivery of real business objectives.

Praxis provides both end-to-end solutions - from requirements gathering to application maintenance - and specific design and development expertise. Our Process Automation methodology has successfully been field-tested in areas like:

- * Process Automation
- * Application enhancement
- * Application re-engineering
- * Application testing
